Fact Sheet for the SAP High Availability Test Tool (v2.1x)

Mission: Allow HA tests with SAP systems

Key characteristics of version 2.1

- **Generate configurable and defined load on SAP WebAS ABAP**
- **For the load following test classes are provided on server side**
  - **Enqueue test class**
  - **Database test class**
  - **File system test class (as of v2.11)**

  → Cover the most important single point of failures of SAP WebAS ABAP
- **Trigger HA events during load phase**
- **Easy installation, execution and analysis**
  - **Same handling across test cases, HA components and platforms**
  - **One installation package for all platforms**
  - **On server side transports for installation and uninstallation provided**
  - **Tool uses own tables and data on the server**
    → no interference with standard SAP applications
  - **Automation of test runs**
  - **Test output of different granularity to support quick as well as detailed analysis**
    - **HA relevant summary of test run to ease fast analysis**
      - **as text and as XML file**
      - **as graphical HTML file (as of v2.12)**
    - **Check against expected result**
    - **Data about each HA event**
    - **Detailed information about each simulated client user**
- **Platforms**
  - **Server**
    - **SAP WebAS ABAP 7.x**
    - **All operating system and database versions on which SAP WebAS ABAP 7.x is released**
  - **Client**
    - **Written in Java 7**
    - **All platforms on which Java 7 or Java 8 and SAP JCo 3.0 are released**
- **Communication protocols: JCo and HTTP(S) supported**
- **Security**
  - **Server: Dedicated user role required**
  - **Client: Fixed directory scheme**
  - **Communication: Secure Network Communication (SNC) and HTTPS supported**
- **Shipment**
  - **Free download via SAP Store**
  - **Details are described in SAP note 2081226**
